

## Standard Adjustabilisers

Standard adjustabilisers with stabiliser wheels at outer lateral positions

- **Will fit nearly any bicycle including most geared bicycles with conventional rigid (non sprung) frames \***
- Continuous horizontal stabiliser wheel adjustment within range
- Maximum useful pre - assembly of parts to ease installation
- Continuous vertical adjustment for space under stabiliser wheels or use provided clips for easy accurate standard space setting
- Strong, durable and good quality
- Saves parents much effort in helping a child learn to balance
- As featured in "Sport and Leisure" an equipment handbook published by the Disability Information Trust of the UK (Tel. 01865 - 227596)
- Tricycles tend to be very expensive and many children regard them as too embarrassing to ride.

\* Based on our 2007 bicycle survey.

**Standard Adjustabilisers - fit nearly any 14" to 20" (36cm to 51cm) diameter wheeled bicycle. Suitable for riders up to 6 stone (84 lbs) (40kg) in weight.  
U.K. price £69 inc. p. & p.**
